ROLL WRAPPING MACHINE

The **PXW 100 E** roll-wrapping machine is engineered to produce the highest quality roll-wrapped Biscuits, Crackers, Rusks, Rice Cakes and similar products on edge style packs, with longitudinal and end fold seals.

PXW-100E

ROLL WRAPPING MACHINE

The **NEW** machine is mechanically and servo driven, its strong design, good-looking packs even for delicate products at high output and format changeover flexibility, single or double wrap with or without tear tape and end labels, make this equipment particularly suitable for the integration as terminal of product's automatic handling and feeding systems.

User-friendly HMI as well as intuitive menus, easy to perform interface tasks with any equipment up stream, solid construction and uncompromising quality of the components and materials are the main characteristics of our PXW 100 E.

The cramps and the electronic film cut have revolutionized the operation of this wrapping machine, giving the maximum reliability at high-speed.
